N.A.<sup>1</sup> - Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year.

N.A.<sup>2</sup> - The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. The three-year annualized standard deviation is not presented for 2018 due to less than 36 months of composite and benchmark data.

**Large Cap Blended Composite:** This composite is best suited for investors that are looking for reasonable growth with a moderate risk tolerance. The model has two distinct portfolios: Core and Satellite. The core portfolio consists of 15-20 large cap stocks that makes up 30%-50% of the portfolio and the Satellite portfolio has few ETFs that make up the rest. The core portfolio stays the same, but we may exit out of any or all of our satellite portfolio ETFs based on our analysis. The benchmark is the SPDR S&P 500 ETF (SPY). The creation date of this composite is July 2018.
